

~ Map Disclaimer ~

Based on initial study results this map shows approximate areas of potential flash flooding expected from a single rain event of 2.00 inches in a one hour period occurring over the drainage basins affected by the Waldo Canyon Fire. This severity of rain event has about a 10 percent chance of occurring each year. These areas were determined assuming debris in flood waters cause blockage at street crossings. Limits and depths are approximate as a wide variety of storms can produce much greater or much less of a flood risk zone. This information is not intended for flood insurance purposes or to replace established FEMA floodplains. Individual property owners are solely responsible for determining their risk level and taking appropriate actions to ensure their own safety and protect property. This is the best information available as of March 1, 2014 and is subject to revision upon release of final study results.

### Preliminary Flash Flood Risk Analysis of the Waldo Canyon Burn Scar South Douglas Creek

**Legend**

<2 ft, S Douglas Creek	Fire Department
2-4 ft, S Douglas Creek	Police Department
>4 ft, S Douglas Creek	US Highways
Burn Perimeter (18,247 acres)	Major Roadways
S Douglas Creek	Streets & Roads
S Douglas Creek	Public Schools
Douglas Creek Undefined Extents	Public School Property
S Douglas Creek Autism Center	Parcels
Lakes & Reservoirs	Public Parks
Creeks	Pike National Forest
Building Footprints (Approx.)	
Incorporated Cities	

Scale: 0, 250, 500, 750, 1,000 Feet
